TrustSEC

TRUSTSEC CREDENTIAL PROVIDER FOR WINDOWS

Passwordless login with biometric smart cards

Your fingerprint, matched on the card.
See it live at TRUSTECH Paris.

Card: BIO SLCOS on Infineon's SLC39B

How Windows sign-in works

1. Your fingerprint is matched on the card.
2. The card creates a one-time code.
3. The code is shown on the reader or in the mobile app.
4. TrustSEC Credential Provider takes the code and Windows lets you in.

What it does

- FIDO2 passwordless login
- PDF digital signing
- BitLocker authentication

Why it matters

- **The template never leaves the card.**
- **No external database is needed.**
